

e2Value's Pronto™ Valuation Service

(Replacement Cost, Data Scoring, Imagery, Risk Mapping)

With a continuous effort to provide our clients with the best, most up-to-date services, Midwest Technical Inspections is proud to offer e2Value's new Pronto™ residential and commercial valuation service as a stand-alone product or in combination with any of our other inspection or loss control services. Pronto™ is a new online replacement cost valuator that delivers instant insurance values as well as data scoring, imagery and risk mapping. It requires only the property address in order to deliver a replacement cost, which is based on various resources including public data such as property assessor sites as well as mapping/satellite engines Google™ and Bing™ Maps. It also draws information from RSMeans and e2Value data to obtain pertinent information. In addition to the replacement cost, Pronto™ also provides square footage, construction type, and the most recent photos available.

e2Value's Pronto™ is a flexible product that reduces errors and omissions, allows insurance professionals to learn more about a property with only a few pieces of information, and lessens the need for a site visit. MTI will take it a step further and provide Quality Control review to ensure that all data points are correct and any omitted items, such as attached garages, are included in the valuation for a more accurate replacement cost.

The Pronto™ valuation service is a low-cost solution that our clients are able to take advantage for obtaining an updated replacement cost on renewal policies as well as small risks where a field visit is not practical. Call us today to learn more about this cost-effective and efficient product.
